ABSTRACT

This is my abstract.

For everyone who wondered whether this would ever be finished.

ACKNOWLEDGMENTS

Thanks to my committee, my family, and the miracle of coffee.

CHAPTER 1

INTRODUCTION

The body of the dissertation begins here, on a page of its own.

Background with a long long long long long long long long long long long long long header

Some background.

Deeper Knowledge

Cool stuff to know.

Block quotes are on their own line starting with the > character. For example, Austen's (1814/1990) *Mansfield Park* has some memorable insights about the mind:

> If any one faculty of our nature may be called more wonderful than the rest, I do think it is memory. There seems something more speakingly incomprehensible in the powers, the failures, the inequalities of memory, than in any other of our intelligences. The memory is sometimes so retentive, so serviceable, so obedient; at others, so bewildered and so weak; and at others again, so tyrannic, so beyond control! We are, to be sure, a miracle every way; but our powers of recollecting and of forgetting do seem peculiarly past finding out. (p. 163)

CHAPTER 2

LITERATURE REVIEW

Some researchers have argued that theory X has merit (Schneider & McGrew, 2018). As seen in Figure 1, theory X asserts *A* causes *B* and that *B* causes *C*.

Before measuring constructs *A*, *B*, and *C*, we need to consider their scales of measurement. The classic levels of measurement in Stevens (1946) are listed in Table 1.

Table 1

Classic Scale Types

Scale	Description
Nominal	Categories without an order
Ordinal	Ordered categories
Interval	Quantities without a true zero
Ratio	Quantities with a true zero

Note. Stevens (1946)

CHAPTER 3

METHODS

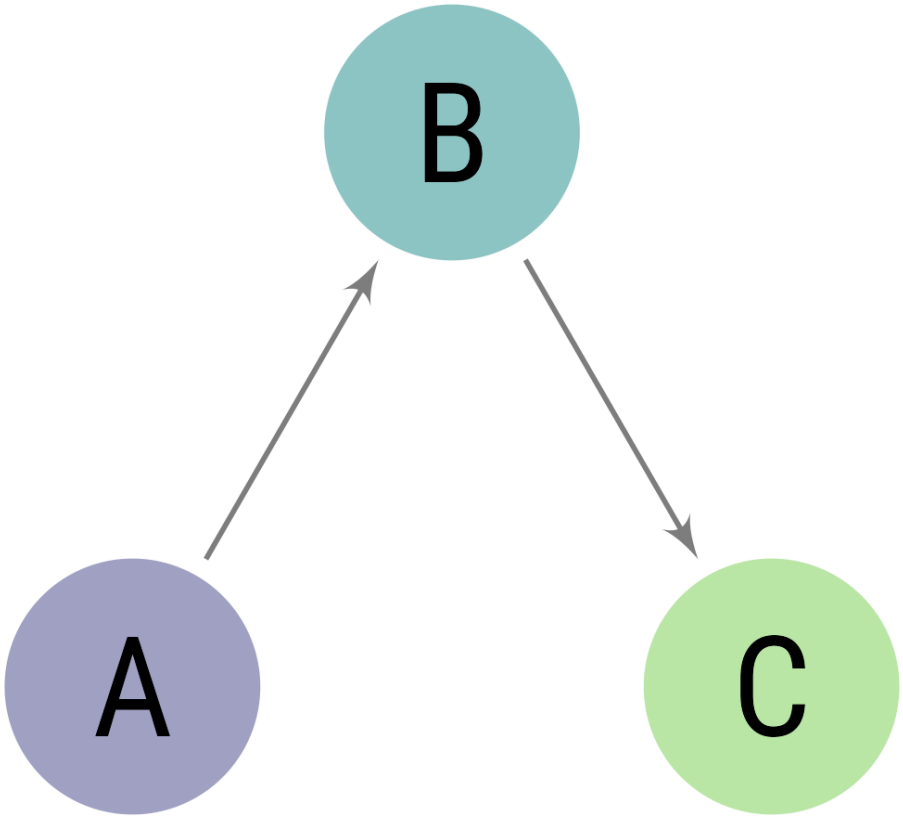

Something about the method.

CHAPTER 4

RESULTS

Figure 1

A figure caption that says what the figure shows.

Note. Optional note below the figure

Table 2

A table caption that says what the table shows. This is a long caption that requires more than a single line of text.

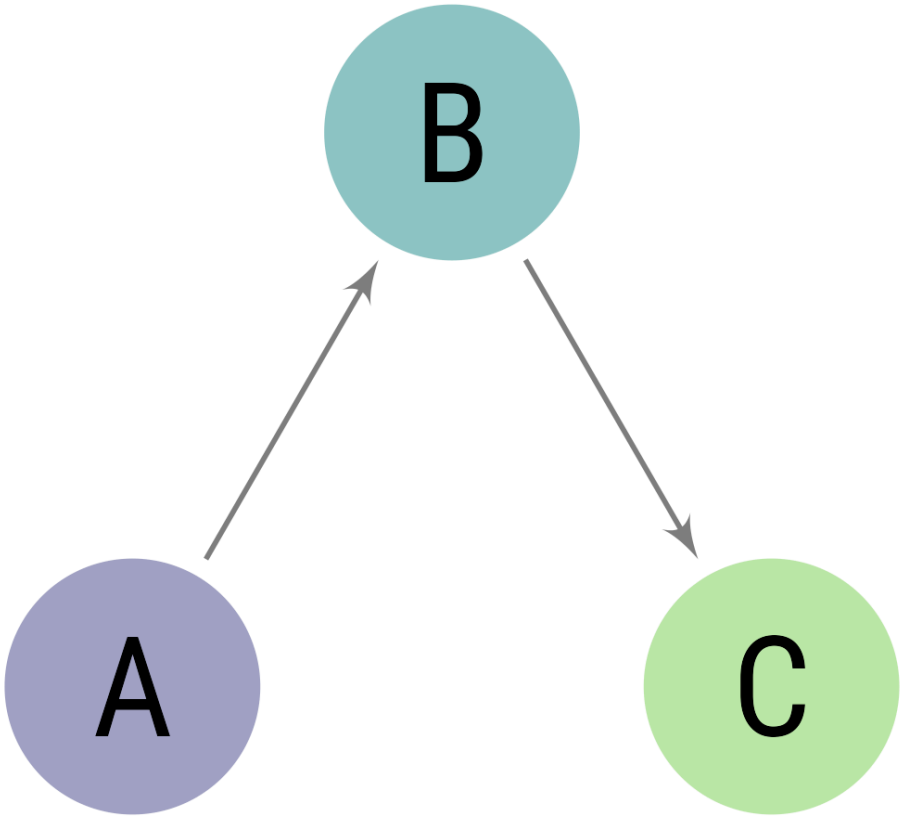

A	B
